

Vaccination prevents disease

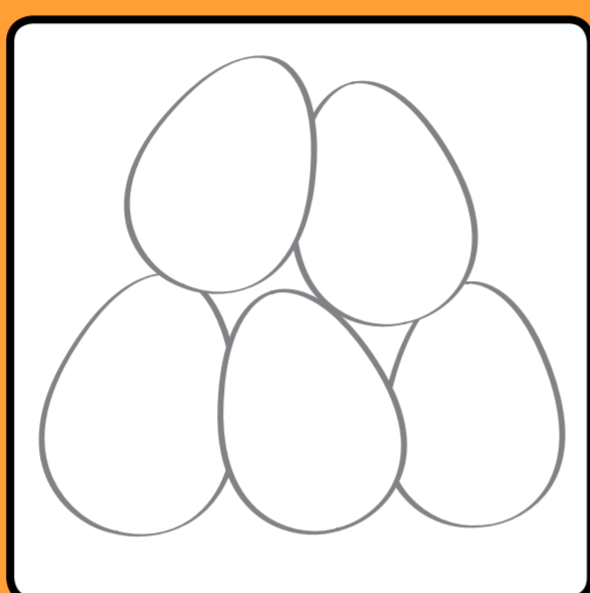

Remember to vaccinate your birds against disease.

Biosecurity is your first line of defence against disease and helps stop its spread. Vaccination is your second line of defence, and helps prevent your birds from catching diseases. Biosecurity and vaccination work together to protect against disease!

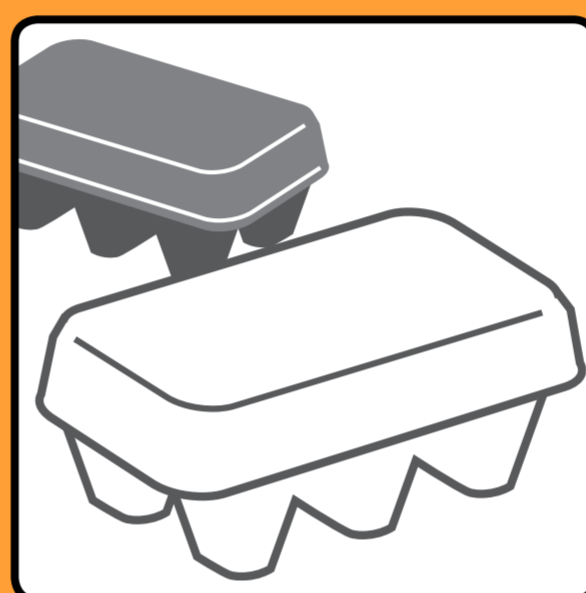

BENEFITS OF VACCINATION:

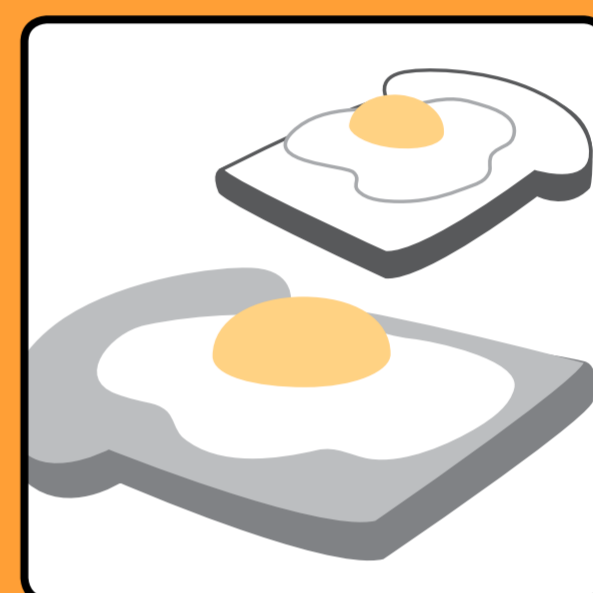

Disease protection

Productivity

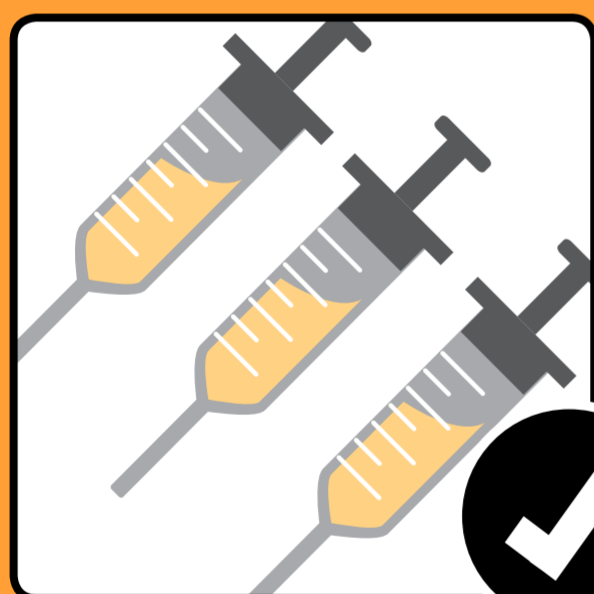

Market access

Safe food

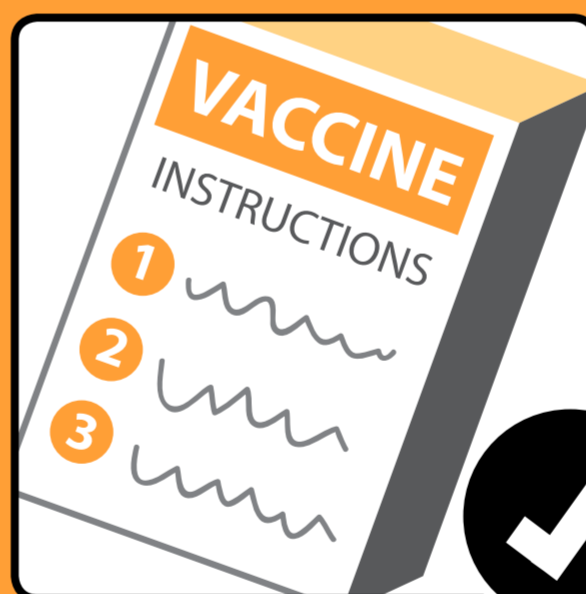

TO BE EFFECTIVE:

Correct vaccine

Correct method

Correct procedure

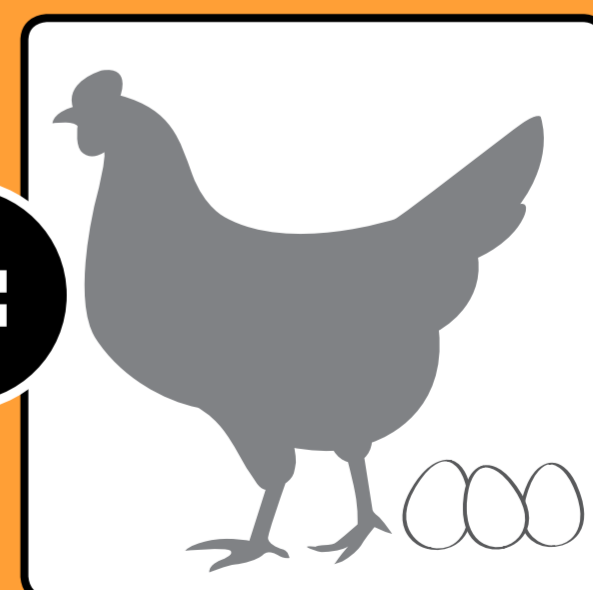

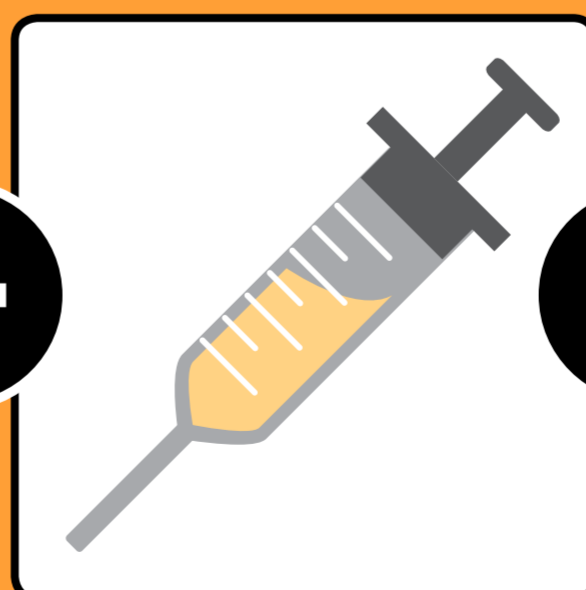

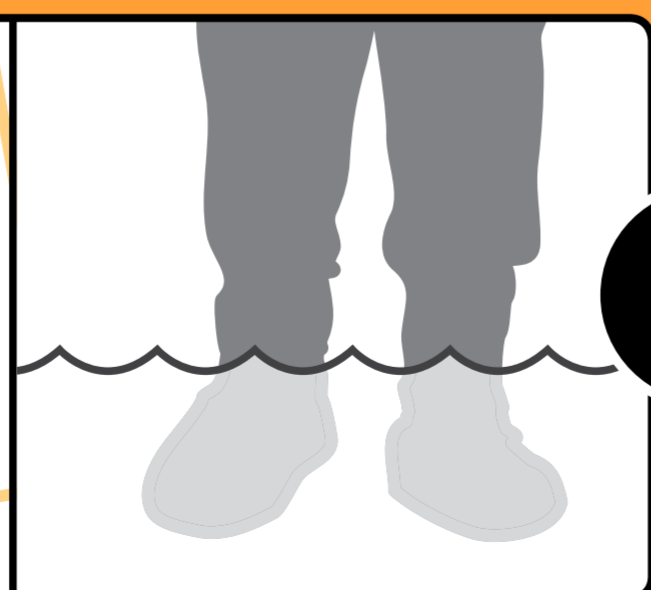

Appropriate timing

GOOD BIOSECURITY + VACCINATIONS = HEALTHY BIRDS

Biosecurity

Healthy birds
