

Safe water for healthy birds

Harmful bacteria and viruses can be transferred to your birds via their drinking or cooling water.

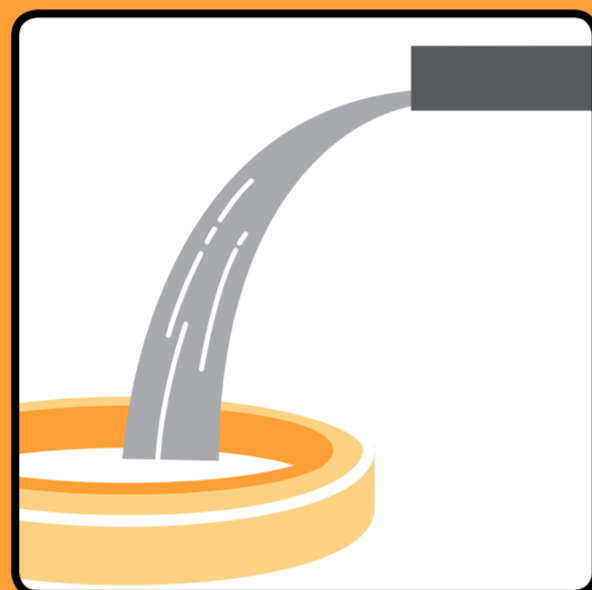

Reduce the risk by using a clean source of water or sanitise before use. Bore water should be tested to see if sanitation is required. All surface water (dams, open tanks/drains and streams) should be sanitised.

All water sanitised on-farm should be tested to ensure that water is safe.

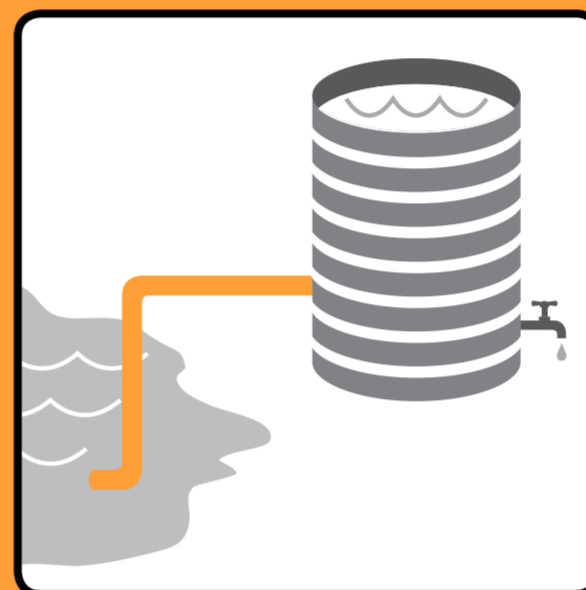

ONLY USE SAFE WATER SOURCES:

Town water

Quality bore water

Sanitised surface water

MAINTAIN AND MONITOR WATER DELIVERY SYSTEMS:

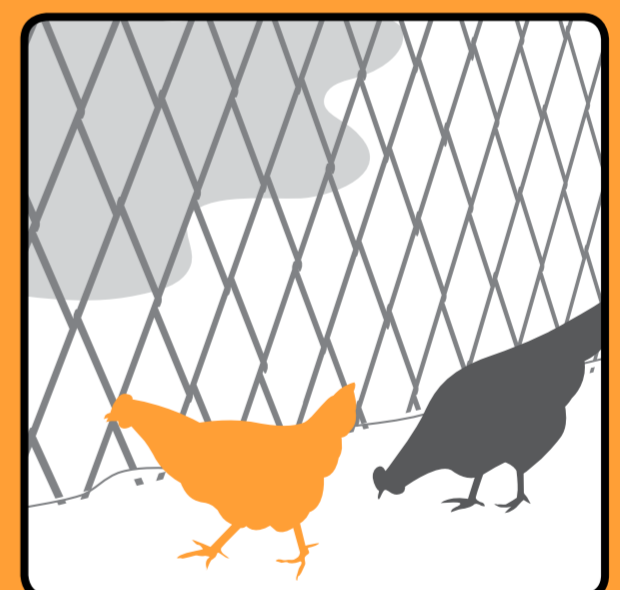

Look and smell

Sanitised water test

Bore water safety

Restrict access

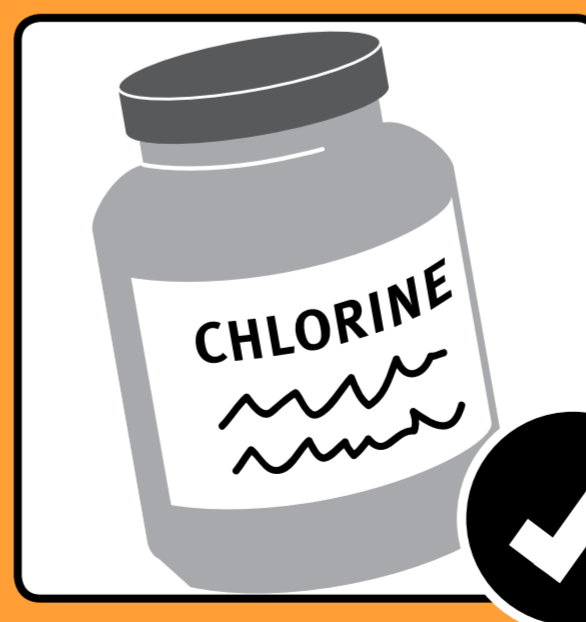

TAKE ACTION IF A PROBLEM IS DETECTED:

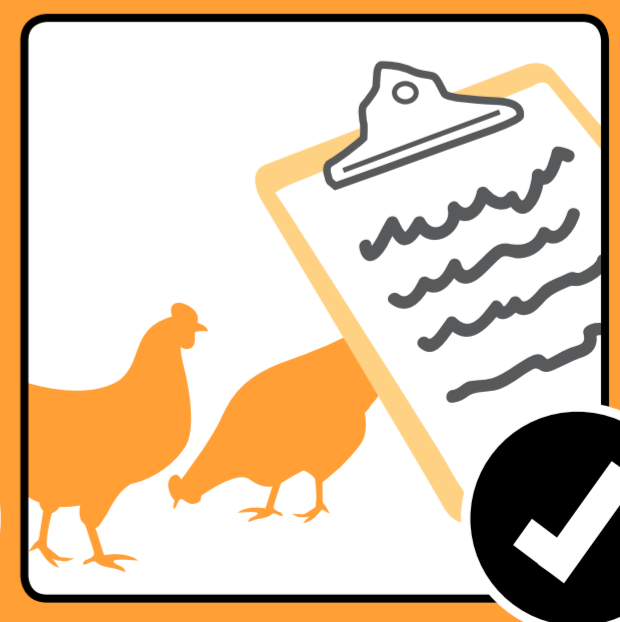

Clean water system

Use alternate source

Sanitise water

Monitor bird health
